LAN International Launching Webinar Series - Online Product Demonstration

Aliso Viejo, CA – November 20, 2008 – LAN International, makers of the VIERO® solutions suite, is set to launch a series of free online product demonstrations beginning next month.

Designed to proactively showcase various components of the VIERO solutions suite, LAN is using the webinars as a way to introduce these products to a new audience of potential users. The series will begin on December 4th with a live demonstration of the VIERO e-PIF® electronic public information file system.

VIERO e-PIF is groundbreaking software which serves as a paperless public inspection file system for broadcast companies. Highly utilized in the radio industry, important new product enhancements have recently been added that will enable TV stations to comply with forthcoming FCC regulations that call for the posting of their public files online. In addition to facilitating website access to public files, VIERO e-PIF enables users to manage information from a local or centralized location, receive automated reminders for time-sensitive reports, and much more.

For more information please visit www.goviero.com/epif .

About LAN International

Now in its twelfth year of operations, LAN International is a software development company providing revolutionary revenue management solutions to broadcast radio entities under the brand VIERO. The company currently serves 1,154 radio stations in over 220 markets across the United States, making it one of the largest providers of such systems in the nation. LAN's state-of-the-art, 24/7 customer support spans the nation with offices in Aliso Viejo, CA (headquarters), San Antonio, TX and Orlando, FL .
