LAN International launches VIERO e-PIF™ – Paperless Public File Software for Television Groups

Aliso Viejo, CA – July 23, 2008 – LAN International, makers of the VIERO Solutions Suite, is introducing their e-PIF product to Television groups across the U.S.

VIERO e-PIF is groundbreaking software which serves as a paperless public inspection file system for broadcast companies. Highly utilized in the radio industry, important new product enhancements have recently been added that will enable TV stations to comply with new FCC regulations that call for the posting of their public files online.

“There has been a tremendous amount of concern revolving around new FCC requirements related to record keeping and the associated costs...we saw a definite need for a cost-effective solution,” said Sharon Blankenship, President/CEO of LAN International. “So e-PIF is really a continuation of VIERO’s rich tradition of providing mission-critical tools based on real-world needs.”

In addition to facilitating website access to public files, VIERO e-PIF enables users to manage information from a local or centralized location, receive automated reminders for time-sensitive reports, and much more.

About LAN International

Now in its twelfth year of operations, LAN International is a software development company providing revolutionary revenue management solutions to broadcast radio entities under the brand VIERO®. The company currently serves 1,154 radio stations in over 220 markets across the United States, making it one of the largest providers of such systems in the nation. LAN’s state-of-the-art, 24/7 customer support spans the nation with offices in Aliso Viejo, CA (headquarters), San Antonio, TX and Orlando, FL .
